

Micro-SIM Cutter

Enter Our World of Services

What will change?

- New mobile phones will come with a smaller SIM card slot → NEW SIM CARDS ARE NECESSARY
- New SIM card dimensions according ETSI TS 102 221 standard
- „Mini-UICC-SIM“ card format: 15 * 12 mm

Sample of a 6 contact Mini UICC SIM card

Sample of an 8 contact Mini UICC SIM card

The Challenge

The network operators and the shops will not always have Micro-SIM cards on hand to give to their customers

Or a customer will want to be able to use his normal SIM card in a handset with a micro-SIM slot

All these challenges make it necessary to have a tool that can bring two generations of mobile phones and SIMs together

The Solution

Our „Micro-SIM cutter“ brings the 2ff SIM card to the micro-SIM card format (12 * 15 mm)

- Our micro-SIM cutter works with SIM cards of all SIM vendors
- It is a high precision tool that cuts and punches to the exact ETSI dimensions.
- And the micro-SIM card will work with all handsets having a micro-SIM slot – and can be plugged in our mirco-SIM adapter as well!

The Features

Our patented tool doesn't allow to cut another format than the correct one through its unique mechanism.

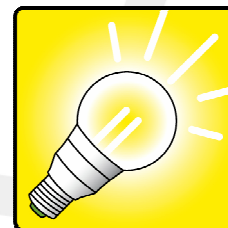

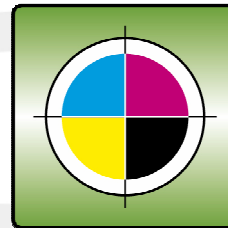

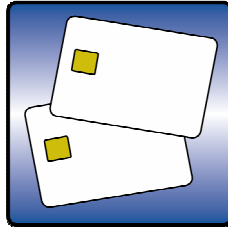

Only if the 2ff SIM card is inserted correctly it can be cut, giving the guarantee that the micro-SIM can be inserted in any micro-SIM slot (including our micro-SIM adapter).

The Features

The chip cannot be pressed as we designed a cavity in the head of the pusher.

Thank you!
