

USAGE AND LIABILITY ADVICE

for Micro-SIM and Nano-SIM Adapters

We produce the micro-SIM and nano-SIM adapters according to our patent. The micro-SIM and nano-SIM adapters can be used in all mobile handsets that have been constructed in accordance to the use of these adapters (particularly in respect of their standard size).

We cannot check the compatibility of our adapters with all and every handset marketed so far nor with the handsets still to be marketed. We therefore advise all our partners to test if our micro-SIM and nano-SIM adapters will work without restriction in the mobile handsets they offer to their customers. We will assume no liability if the use of our standard and faultless produced micro-SIM and nano-SIM adapters cause any damages at handsets.

Please do not use the adapters in your mobile phone without the SIM card. This can cause some difficulties when removing the adapter out of the mobile phone.

For inserting the SIM card into the adapter please place the adapter onto a firm and even surface. Then the SIM card can be pushed in until it fits flat in the adapter.

Please make sure that the SIM card and the adapter don't overlap.

Please never use several adapters together (like for instance a 4FF adapter in a 3FF adapter), but always use the adapter suited for your SIM card and your handset.

Bernd Lücke
